

# YOUSEF AL OMARI

## Software Development Engineer

+962 7 88230155 | [GitHub](#) | [linkedin/yousef](#) | [omariyousef30@gmail.com](mailto:omariyousef30@gmail.com) | Amman-Jordan

### Summary

---

Highly motivated Computer Science fresh graduate specializing in backend development with Java and the Spring Boot ecosystem. Experienced in architecting secure RESTful APIs, optimizing database operations, and applying design patterns. Seeking a remote software engineering internship to leverage problem-solving skills and contribute to scalable digital solutions.

### EDUCATION

---

[Bachelor of Computer Science] | [Yarmouk University] | [2021-2025]

### PROJECTS

---

**Chess Game (Graduation Project)**, *Tech Stack: Java, Spring Boot, PostgreSQL, Spring Security, JWT*

- Developed a full-stack chess game using Spring Boot (Java) and React (JavaScript) with real-time multiplayer via WebSockets and Stockfish AI integration
- Implemented secure JWT authentication and enforced complete chess rules and game logic

#### Facebook-style Application

- Built a social media-inspired CRUD application with authentication, posts, comments, reactions, and friend connections, demonstrating strong full-stack development and database design skills

**Posting Website Backend**, *Spring JDBC + Spring Web (PostgreSQL)*

- Built a social platform backend supporting full CRUD operations for users, posts, and comments using modular Spring JDBC architecture.
- Integrated advanced features including pagination, sorting, user blocking, and centralized exception handling for API reliability.

**YouTube-Style Notification System (Observer Pattern)**, *Java*

- Designed a real-time event notification system utilizing the Observer Pattern to manage video uploads and user subscriptions.
- Optimized event distribution using HashMap-based services to safely handle concurrent updates and prevent duplicate notifications.

**User Authentication REST API, Spring Boot & JWT**, *Technology: Spring Boot & JWT Lead Backend Developer*

- Architected a secure REST API with JWT-based authentication, implementing a dual-token strategy (Access/Refresh) for robust session management.
- Secured critical endpoints and developed a secure logout mechanism via token blacklisting and robust password hashing.

**Elasticsearch-Style Text Analyzer**, *Java*

Engineered a modular text-processing engine using the Builder Pattern with customizable filters and regex-based tokenization.  
Implemented an Inverted Index system using optimized data structures to enable efficient token-based document search and scoring.

### SKILLS

---

Java, Python, Spring Boot, Problem solving, Algorithms, Data structures, Object-Oriented Programming (OOP), Clean code, Design patterns, SOLID principles, SQL, Spring security, Git, GitHub, Teamwork and collaboration, Testing and debugging

### Languages

---

- Arabic • English
