EDUCATION

Yarmouk University
BSc Computer Science and Information Technology

Irbid, Jordan
Oct 2021 - Sep 2025

PROJECTS

Final Year Project *Java, Spring Boot, React, WebSocket, JWT, Stockfish API*

<https://github.com/yousefomari03/Chess>

Developed a web-based chess platform with real-time multiplayer, AI-powered bot matches (Stockfish), and puzzle solving from Lichess database. Implemented complete chess rule enforcement, WebSocket-based live gameplay, secure JWT authentication with email verification, and responsive React UI. Integrated third-party APIs and managed complex game state logic including check, checkmate, and draw conditions.

Youtube Notifaction System *Java 17, Design Patterns, Maven*

<https://github.com/yousefomari03/youtubenotificationsystem>

Implemented Observer design pattern to build a YouTube-style notification system in Java. Developed Channel (Subject) and User (Observer) classes with subscription management, built ChannelService using HashMap for in-memory channel storage, and engineered real-time notification broadcasting to subscribed users. Demonstrated SOLID principles and design pattern best practices with robust input validation and loose coupling between components.

Social Media Platform Backend API *Spring Boot, PostgreSQL, Spring Data JDBC, Maven, Java 17*

<https://github.com/yousefomari03/Social-media-platform>

Developed RESTful backend API for a social media platform with user management, posts, comments, and friendship requests. Designed PostgreSQL database schema with 4 normalized tables featuring foreign key relationships and cascading deletes. Implemented layered MVC architecture using Spring Boot with controllers, services, repositories, and DTOs. Built friendship management system with request workflows and CRUD operations using Spring JDBC Template for efficient database interactions.

Github Clone (In Progress) *Spring Boot, Java, PostgreSQL, React*

A full-stack web application replicating core GitHub functionality for version control and collaboration. The platform allows users to create and manage repositories, perform Git operations (clone, commit, push, pull), manage branches, and collaborate through pull requests and code reviews. Features include user authentication, repository access control (public/private), file viewing and editing, commit history tracking, issue tracking, and markdown README support. Built with a modern tech stack including a backend API for Git operations and database management, and a responsive frontend for seamless user interaction with repositories and collaboration features.

CERTIFICATES

Arab Collegiate Programming Championship Local Contest

Yarmouk University

Awarded 2nd Place among all competing teams in the university-level qualifier. Advanced to represent the university at the national level based on this result.

Sep 2023

Arab Collegiate Programming Championship National Contest

Yarmouk University

Represented Yarmouk University at the nationwide Jordanian ACPC contest. Ranked 32nd overall among all national participants.

Nov 2023

SKILLS

Programming Languages:	Java, Python, HTML, CSS, Javascript, C#, C++, React, PostgreSQL, Lombok
Framework & Technologies:	Springboot, RESTful APIs, Maven, WebSocket & STOMP Protocol, JWT, Git/Github
Technical Skills:	Design Patterns, SOLID Principles, Object-Oriented Programming, State Management
Soft Skills:	Problem-Solving, Team Collaboration, Time Management, Analytical Thinking
Languages:	Arabic (Native), English (Good)
